

CHAMPIONING CIRCULARITY

We set the bar for 100 % recycled, green copper.

Made in Europe.

REACH YOUR SUSTAINABILITY GOALS AND LOWER YOUR EMISSIONS.

Our upcycled copper boasts the industry's lowest carbon footprint – we are best-in-class. By eliminating the need for mining and using renewable energy in our refining process, our copper's environmental impact is reduced drastically. And thus, our material directly reduces your product's Scope 3 emissions.

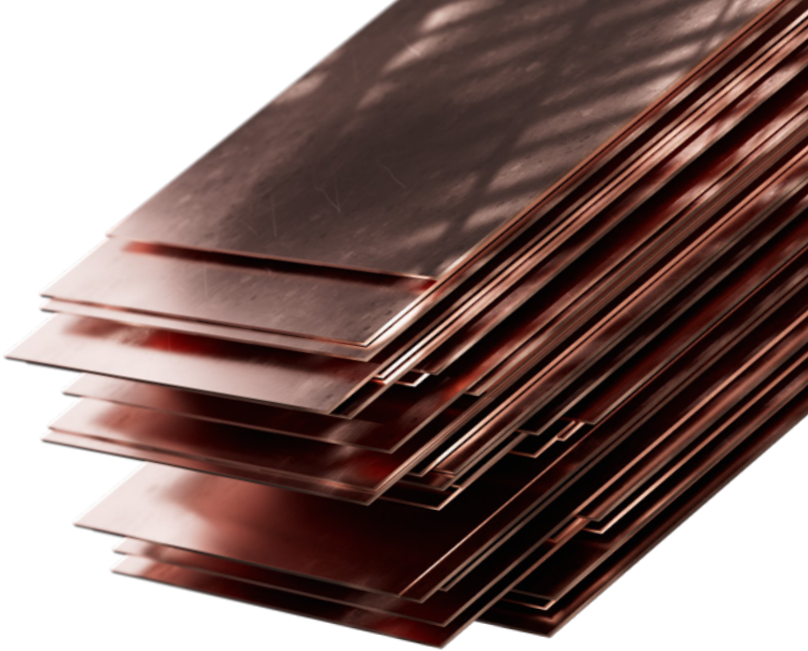

Our copper cathode's Product Carbon Footprint is independently verified according to ISO 14067.

TAKE IT TO THE NEXT LEVEL WITH BRX GREEN.

Our new product brands BRX GREEN and BRX GREEN PLUS come with a carbon footprint certificate to verify the CO₂ reductions of 84% compared to the global industry average. This directly impacts your product emissions and provides transparency for your Scope 3 accounting.

By upcycling scrap and waste into high-purity copper, you join us pioneering the circular economy: We buy back your production scrap to use it as a valuable resource. Circularity may be completed by delivering our BRX GREEN back to you.

Our copper meets the highest quality standards (LME Grade A) and therefore has at least the same high quality that you would expect from copper from primary raw materials. With our exclusive BRX GREEN PLUS, we even go one step further in terms of quality.

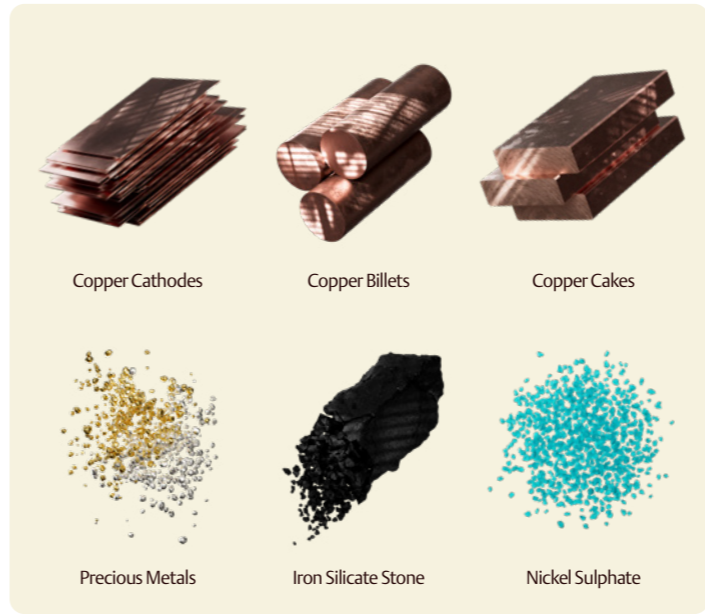

MINIMIZE YOUR SUPPLY CHAIN RISKS THANKS TO ZERO MINING AND TRANSPARENT SOURCING.

Copper made in Brixlegg not only meets European environmental regulations, ensuring compliance and risk mitigation. Our upcycling practices mean no mining involved. Instead, we guarantee full transparency throughout our supply chain – both upstream and downstream – thanks to recycling and upcycling from 100% scrap source.

→ ISO 14001 Certification

→ ISO 45001 Certification

→ ISO 9001 Certification

COPPER IS KEY, BUT THERE IS MORE.

Our core product range includes copper cathodes, billets and cakes – pure copper or alloys cast in various dimensions, cut to the size you require and produced in a number of variants. However, the upcycling process captures a wide range of high value products including gold, silver, nickel sulphate and iron silicate stone. Metallic impurities such as zinc, tin and lead are removed and collected in filters and further recycled in specialised refineries. We also produce Flowbrix. This is our own branded fungicide product used for plant protection in organic farming.

Our sales team is happy to help you join the circular economy by purchasing 100% recycled metals.

UPCYCLING COPPER IS OUR TRADITION AND OUR FUTURE.

With over 350 employees based at our Brixlegg location, we are a key industry leader in Western Austria. Our products boast high market recognition, excellent quality, and numerous areas of application. The “BRX” brand, registered on the London Metal Exchange, is a well-known and trusted trademark across the globe.

For almost 50 years, 100 % of our copper cathodes has been made from recycled copper and secondary materials. Today, we are still the only ones dedicated to 100% upcycling.
